

Figure 5. Intensity power spectra of $H\alpha$, $[O\text{ III}]$, $[O\text{ II}]$, and $H\beta$ lines at different redshift ranges in $0.8 \leq z \leq 5.2$. These power spectra have included the dust extinction effect. The dashed curves show the 1-halo and 2-halo terms for $z = 4.8 \pm 0.4$, the dashed-dotted lines are the clustering power spectra, and the dotted lines are the shot-noise power spectra.
